N° 2\_2025

## New standard for DF / DFF / DFP / FLND / FMND LF / MDF

### The new HYDAC standard for in-line filters

The above-mentioned complete filters as well as their housings and elements have been or will be renamed in order to clearly declare the former /-SO882 solution for pressure filters (filter housing with mandrel) as a standard solution. The new designation no longer identifies the complete filter with mandrel as a special solution and has been adopted from the type code structure of the new quality standard.

**These elements are compatible with the previous standard line filters!**

#### COMPLETE FILTER

old ▶ DF ON 110 T C 3 A 1.0 old  
DF ON 110 T C 3 A 1.0 /-SO882

**NEW** ▶ DF ON 110 T C 3 A 1.5 **NEW**

#### ELEMENTS

▶ 0110 D 003 ON  
0110 D 003 ON /-SO882

▶ 0117 D 003 ON

### ATTENTION!

In some cases, **only** the version of the element according to the new standard is still available (xxx7), which is then the only option available for a filter housing according to the old standard (xxx0).

**In this case, the element version xxx7 must be used.**

### Possible sizes

The DF, DFF, DFP, FLND, FMND, LF and MDF filters in the available sizes should be offered in the **new version .5** if possible. This applies to the following filter media:

- ON (Optimicron) or SN (SUSTAINMICRON)
- BH4HC (Betamicron)
- W/HC (woven wire cloth)

If you have any questions or suggestions, please do not hesitate to contact us.
